

Identification of XBRL 2.1 State of Play

14th XBRL Europe Day

Brussels, 25 November 2014

*Antonio Conte, Project Manager
Unit "Key Enabling Technologies and Digital Economy"
DG Enterprise and Industry – European Commission*

Regulation (EU) 1025/2012

- Identification of ICT technical specifications which may be referenced in public procurement (Articles 13 and 14)
 - Proposals from Member States or Commission
 - European Multi-Stakeholder Platform on ICT Standardisation to advise
 - Requirements for the identification (Annex II)
 - The identified ICT technical specifications shall constitute common technical specifications referred to in public procurement Directives + Directive 2009/81/EC + Regulation (EC, Euratom) 2342/2002.

Requirements for the identification (I)

- The technical specifications have market acceptance and their implementations do not hamper interoperability with the implementations of existing European or international standards.
- The technical specifications are coherent as they do not conflict with European standards, i.e. they cover domains where
 - the adoption of new European standards is not foreseen within a reasonable period
 - existing standards have not gained market uptake or where these standards have become obsolete
 - the transposition of the technical specifications into European standardisation deliverables is not foreseen within a reasonable period.

Requirements for the identification (II)

- The technical specifications were developed by a non-profit making organisation which is a professional society, industry or trade association or any other membership organisation that within its area of expertise develops ICT technical specifications and which is not a European standardisation organisation, national or international standardisation body, through processes which fulfil the following criteria:
 - openness
 - consensus
 - transparency
- Further requirements on maintenance, availability, IPR essential to the implementation of specifications [to be licensed to applicants on FRAND basis], relevance, neutrality and stability, quality.

The identification process

- Member State/Commission proposal
- Set up of an Evaluation Group and preparation of a report
- Discussion of the report and advice by the Platform
- Consultation of sectoral experts
- Commission's Implementing Decision to identify the technical specifications eligible for referencing in public procurement

Composition of the Evaluation WG

- DK
- ES
- NL
- SE
- UK
- CH
- CEN
- DigitalEurope
- IEEE
- XBRL International (Observer)
- DG ENTR (Secretariat)
