

European Interoperability Framework (EIF) and common specifications

Ioannis Sagias, European Commission
Ignacio Boixo, CEN workshop on XBRL

Context & background

III. Maximising the growth potential of the Digital Economy

Adoption of a **Priority ICT Standards Plan** and extending the **European Interoperability Framework** for public services

EIF revision: why?

Alignment with policy development

- › Policies having a strong linkage with IOP have been either recently launched (e.g. DSM strategy) or revised (e.g. PSI Directive).

Extend and align with emerging trends

- › Include the European Reference Interoperability Architecture (EIRA) and Cartography (EIC)
- › ICT (e.g. Cloud)
- › Information management (e.g. Big data, Open data)
- › Security
- › Organisational and governance structures

More focus on EIF implementation

- › NIFs aligned with EIF to a large extent (72%)
- › **Application** (implementation and monitoring) of NIFs still lags behind (28%)

EIF revision: what is in it

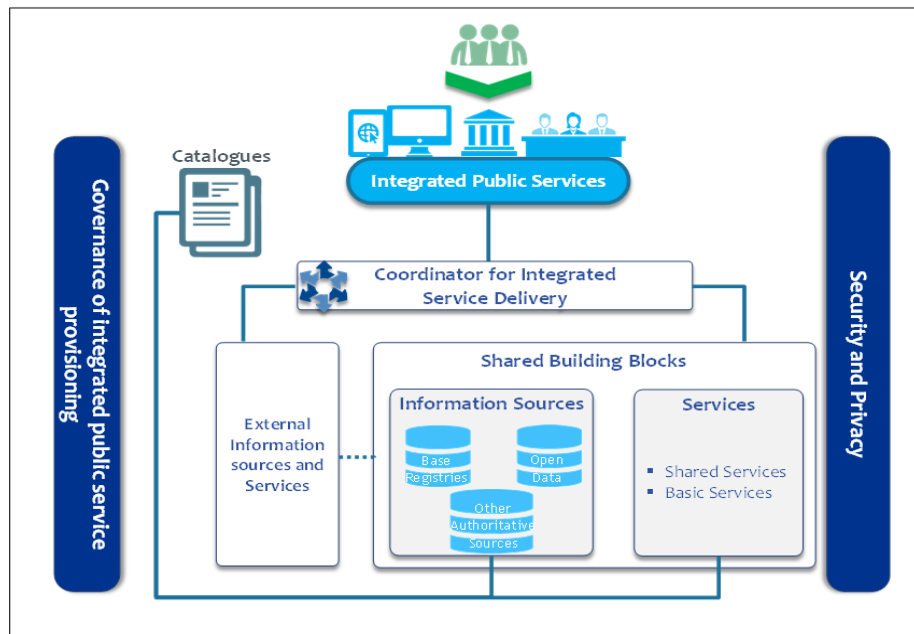

Updated IOP Recommendations

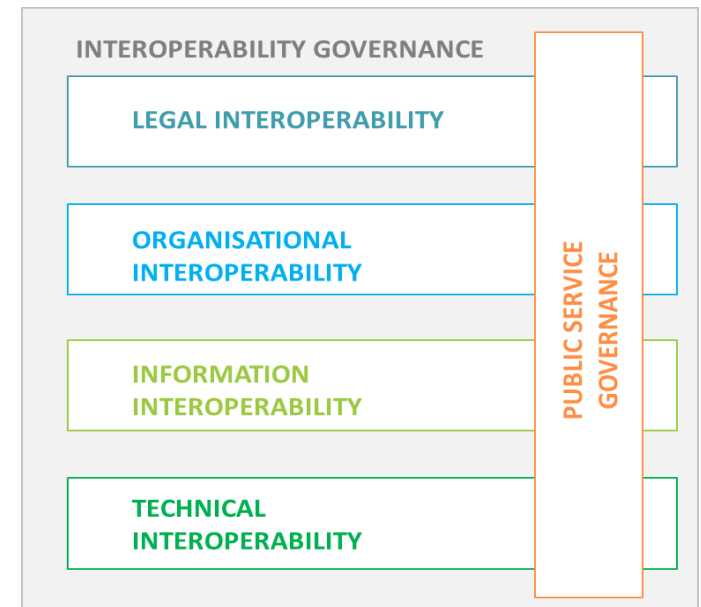

Recommendation 24.

example

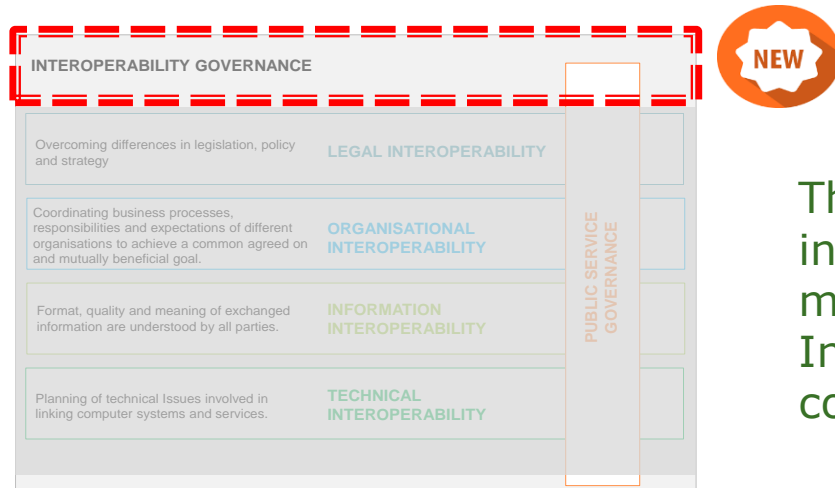

Public administrations should publish the data they own as open data unless certain restrictions apply. Open data should be published in machine-readable, non-proprietary formats.

Updated IOP Models

EIF revision: interoperability governance

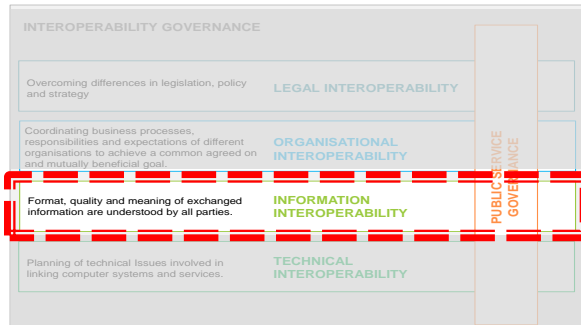

The Interoperability Governance has been included in the model with a bigger scope, with a more clear definition and new recommendations. In the previous EIF, it had neither enough content nor enough weight.

Added new recommendations in order to suggest the:

- Establishment of a NIF for the governance of interoperability across administrative levels
- Alignment of the NIFs with the EIF
- Establishment of organisational structures for the governance and monitoring of the interoperability activities

EIF revision: information interoperability

Semantic Interoperability has changed to
Information Interoperability

Recommendation 44.

NEW

Public administrations should perceive data and information as a public asset which should be appropriately generated/collected, managed, shared, protected and preserved.

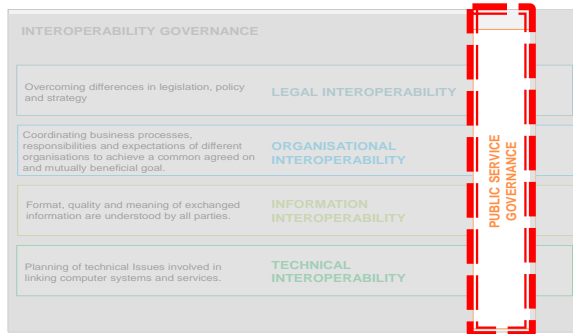

Recommendation 45.

NEW

Public administrations should put in place an information management strategy at the higher possible level to avoid fragmentation and duplication. Metadata, master data and reference data management should be prioritised.

EIF revision: public service governance

Public Service Governance is the new crosscutting Layer added to the model, which includes:

- organisational structures and roles & responsibilities in governance
- interoperability agreements
- IT processes for the service management

It was included because there was a need to involve all the topics related to organizational aspects that are cross-cutting and influencing all the IOP layers.

They were previously included in the Organizational Layer.

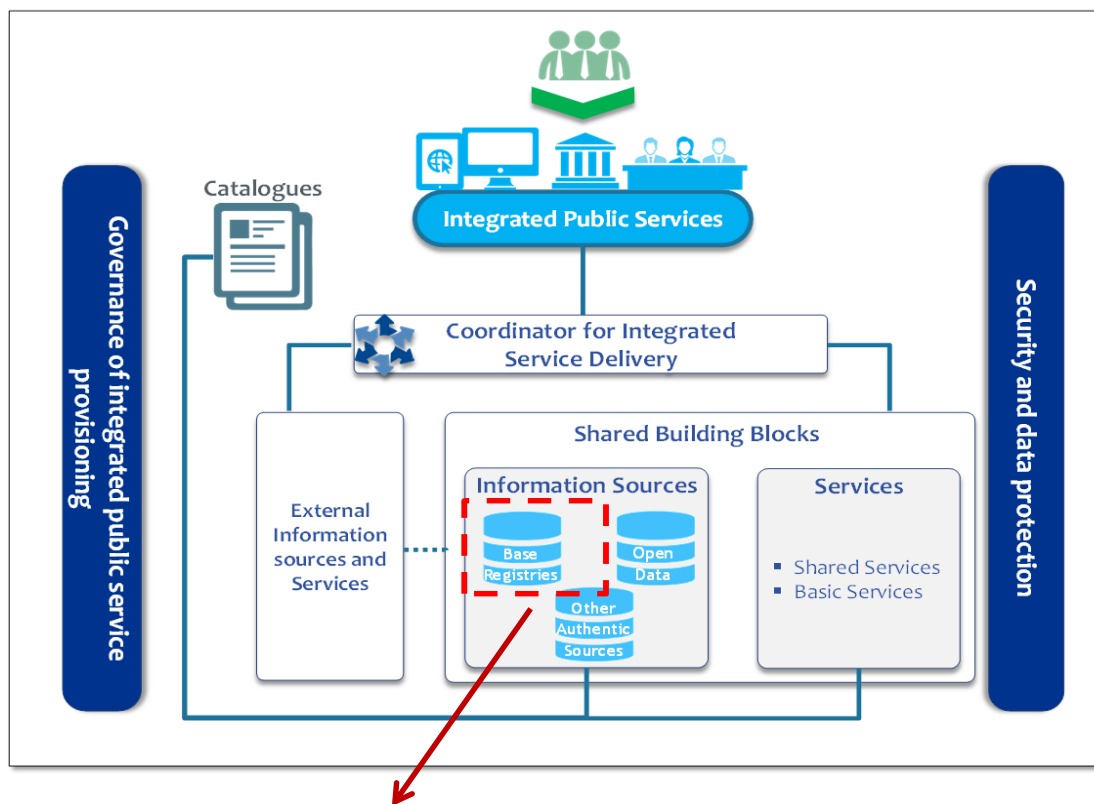

Recommendation 38.

Public administrations should ensure that interoperability is ensured over time when operating and delivering European Public Services.

EIF revision: base registries

Base registries are reliable sources of basic information on items such as persons, companies, vehicles, licences, buildings, locations and roads.

This type of information constitutes the master data for public administration and European Public Service delivery.

EIF revision: base registries

Make available

Recommendation 20.

Public administrations should make authoritative sources of information available to others while implementing access and control mechanisms to ensure security and privacy in accordance with the relevant legislation.

Interface with

Recommendation 21.

Public administrations, when working to establish European Public Services, should develop interfaces to base registries and authoritative sources of information, and expose the semantic and technical data needed for others to connect and reuse the information. These data should be aligned whenever possible.

Describe

Recommendation 22.

Each base registry should be accompanied by description of its content, service assurance and responsibilities, type of master data it keeps, conditions of access, terminology, glossary, as well as which master data it consumes from other Base Registries (if any).

Plan & update

Recommendation 23.

Public administrations should create plans for base registries and related master data, and keep them updated.

Data standards

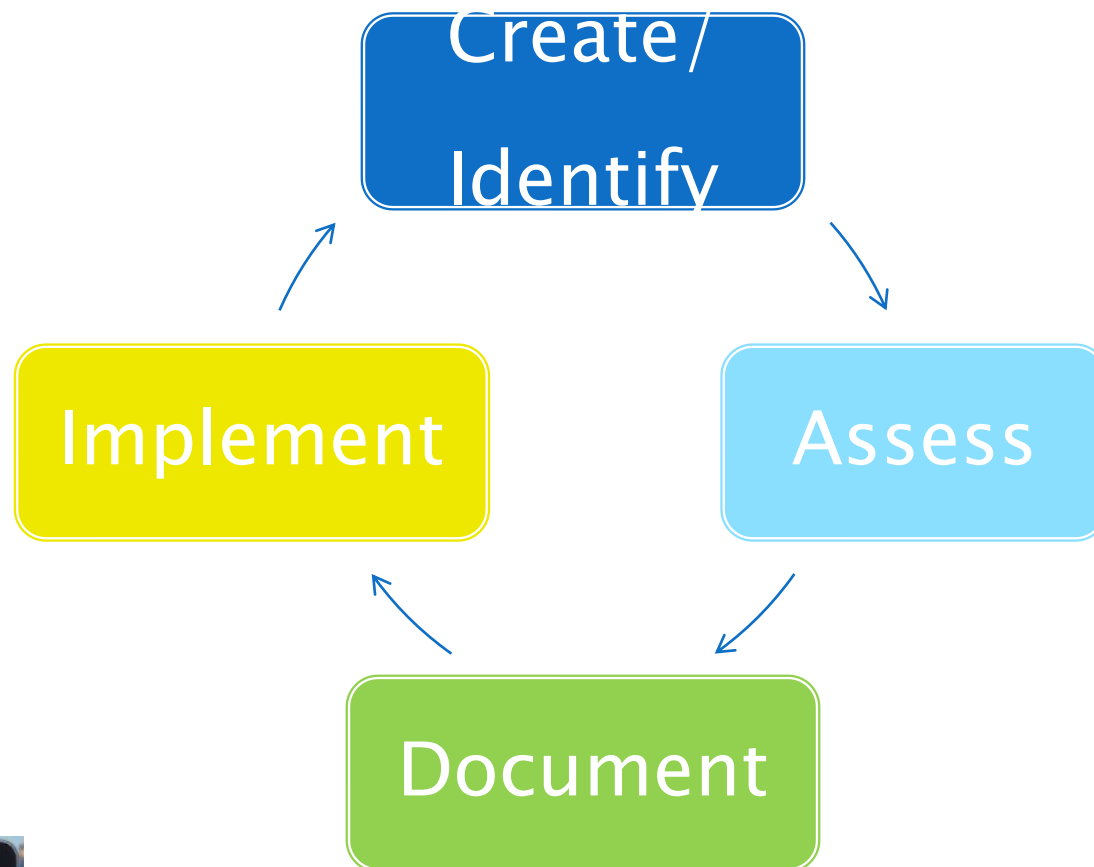

What: Social agreements on how we describe the world

Problem statement: Data standards suffer from domain and country-based fragmentation

Our aim: We need universal data standards in a similar way we need universal technology standards

Identification of ICT technical specifications

- ▶ Legal basis: Regulation (EU) 1025/2012, Articles 13 and 14
- ▶ Scope: To support the public procurement of ICT product and services
- ▶ First assessment of their use and effects to be started soon in the MSP

Identified ICT technical specifications do not become European or international standards! They are only intended to help the public procurement in order to respond to the fast evolution in the field of ICT, facilitate the provision of cross-border services, encourage competition and promote interoperability and innovation.

Joint Initiative on Standardisation

- ▶ An action of the Single Market Strategy
- ▶ It sets out a shared vision for European standardisation in order to take steps to better prioritise and to modernise the current European standardisation system, as well as to strive for the timely delivery of standardisation deliverables
- ▶ To be signed on the 13 June in Amsterdam

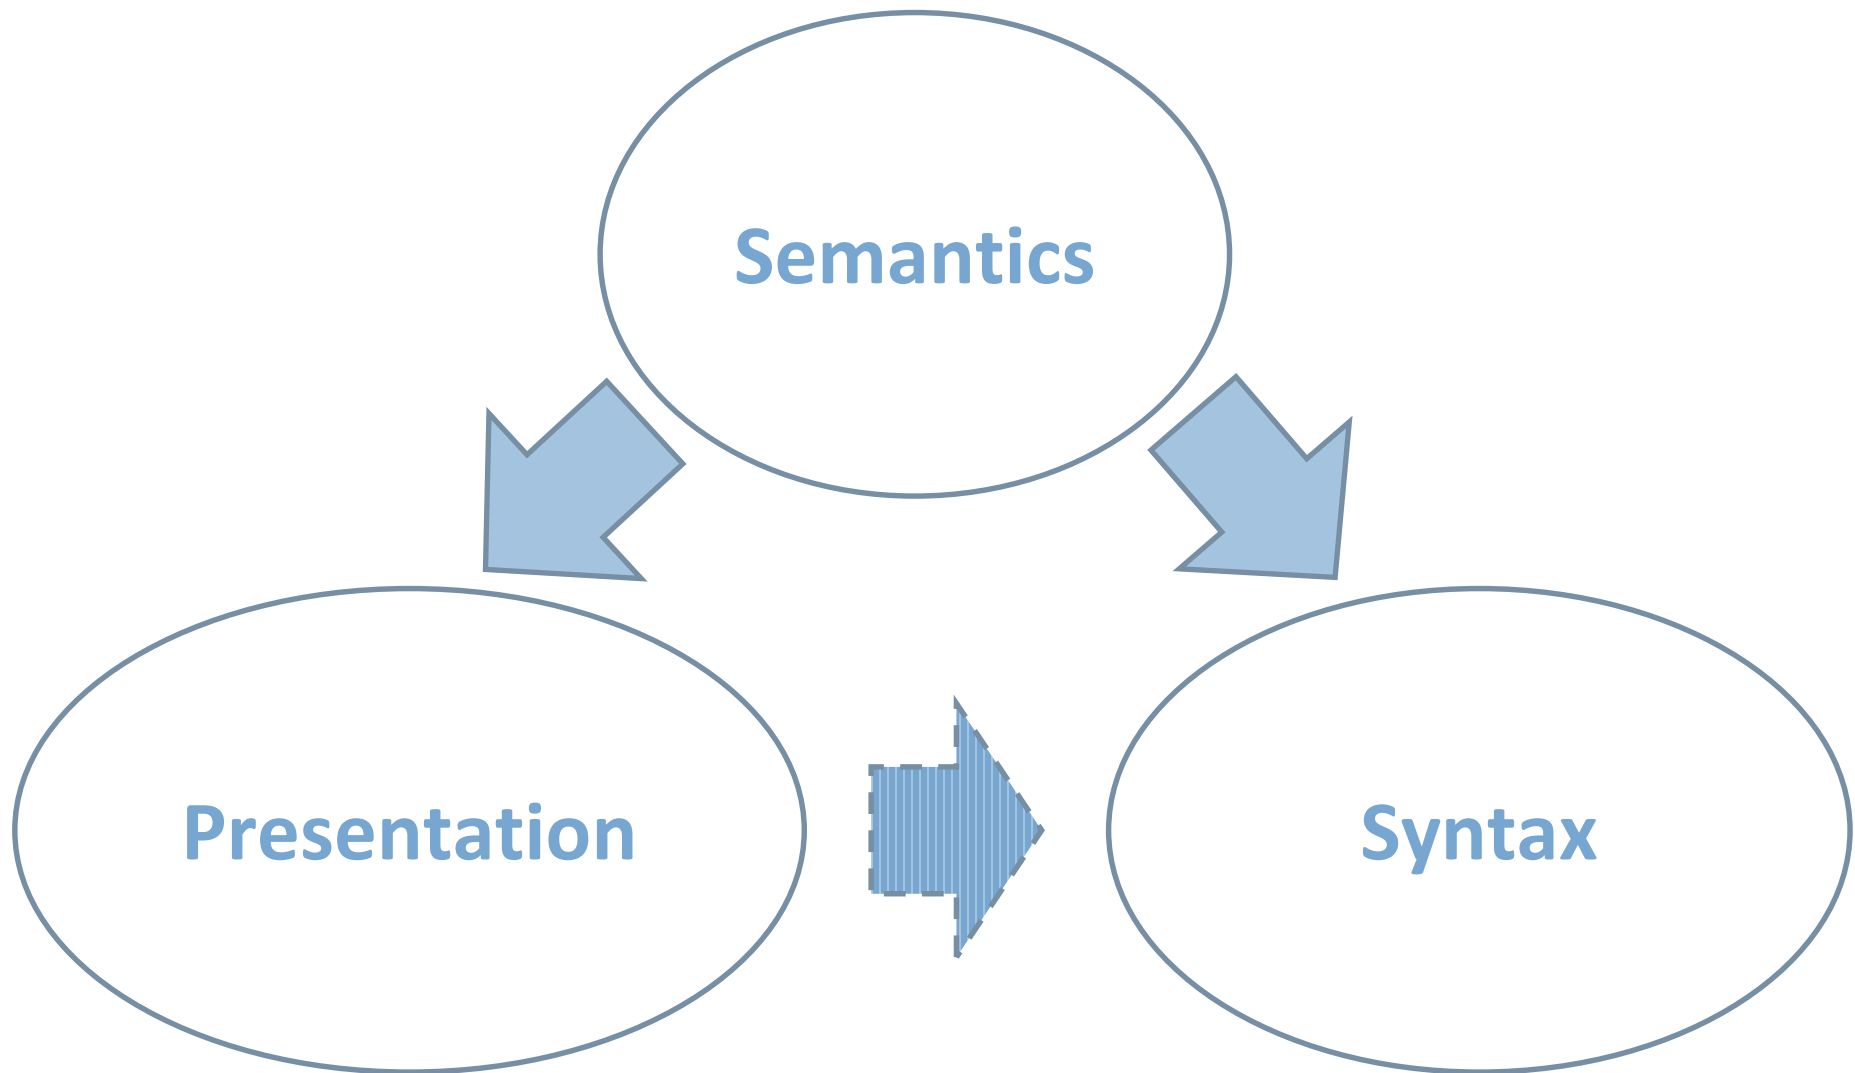

ICTs for referencing in public procurement

- ▶ 28 January 2016: eXtensible Business Reporting Language 2.1
Article 1: The eXtensible Business Reporting Language version 2.1 is eligible for referencing in public procurement.
For the Commission, the President: Jean-Claude JUNCKER
- ▶ 28 July 2015: Integrating the Healthcare Enterprise profiles
- ▶ 31 October 2014: Universal Business Language version 2.1
- ▶ 3 April 2014: ICT technical specifications
 - Internet Protocol version 6 ('IPv6')
 - Lightweight Directory Access Protocol version 3 ('LDAPv3')
 - Domain Name System Security Extensions ('DNSSEC')
 - DomainKeys Identified Mail Signatures ('DKIM')
 - ECMAScript-402 Internationalisation Specification ('ECMA-402')
 - Extensible Markup Language version 1.0 ('W3C XML')

CONTENTS

ABOUT THIS ISSUE
The six cover features in this issue highlight the technical, semantic, syntactical, organizational, and legal aspects of Europe's e-government interoperability challenges, as well as success stories.

COVER FEATURES

22 E-Government Interoperability: Linking Open and Smart Government
Carlos E. Jiménez, Angelos Panagiotas, and Francisco Saez

25 Promoting Interoperability in Europe's E-Government
Konstantinos Bovalis, Vassilios Peristeras, Margarida Abecasis, Raul-Mario Abril-Jimenez, Miguel Alvarez Rodriguez, Corinne Gattegno, Athanasios Karalopoulos, Ioannis Sagias, Szabolcs Szekacs, and Suzanne Wigard

34 E-Health Demystified: An E-Government Showcase
Mario Kovac

44 Interoperability in Big, Open, and Linked Data—Organizational Maturity, Capabilities, and Data Portfolios
Marjin Janssen, Elsa Estevez, and Tomasz Janowski

October 2014, Volume 47, Number 10

25 **Promoting Interoperability in Europe's E-Government**
Konstantinos Bovalis, Vassilios Peristeras, Margarida Abecasis, Raul-Mario Abril-Jimenez, Miguel Alvarez Rodriguez, Corinne Gattegno, Athanasios Karalopoulos, Ioannis Sagias, Szabolcs Szekacs, and Suzanne Wigard

Europe's Interoperability Solutions for Public Administrations (ISA) program has created a model for implementing interoperability solutions across technical, semantic, organizational, and legal levels.

Submitted by [Eia Team](#) on August 06, 2014

Description

With the growing amount of information exchanges between public services (across borders and sectors), the need for interoperability in Europe is higher than ever. The ISA Action 2.1 (EIA) introduces a reference architecture to guide public administrations in their work to provide interoperable European public services to businesses and citizens.
