1. Introduction

This article briefly explains what is the Data Point Methodology (*DPM*, also known as *Data Point Model*) and set of references of this methodology of design with the economic reports.

2. The Data Point Methodology (DPM) as ISO standard 5116

The DPM model is a logical model oriented to data with business meaning and based on the *Multidimensional Data Model* (MDM) and in which the information requirements of European supervisors are reflected [57..64; 65..70;109..111].

The reports required by supervisors have predefined requirements through various regulations and are represented in tables. In 2005, the European Supervisors and Regulators had to consider a unification in data to collect from financial institutions, until that moment each country had its dictionaries with definitions of economic data, and they planted their unification [5; 7].

A first aim was the realization of a set of reports necessary in banking supervision, COREP (*C*Ommun*s*olvency *r*atio *R*E*P*orting) [1; 2; 4; 6; 8]. Dictionaries of items to collect were created.

COREP is defined by the EBA (*European Banking Authority*¹, formerly *Committee of European Banking Supervisors*) to be used by credit institutions and investment firms when they report their solvency ratio to supervisory authorities under the *Capital Requirements Directive* (CRD) [30].

In 2007, a first model was developed, based on metrics. domains and dimensions, which was initially proposed by the *Banca d'Italia*, was the *Matrix Schema* [10;12].

The first data point models (DPM) began to be developed from the *Matrix Schema* in 2009 to describe metadata without redundancy, in a coherent and unambiguous way [16].

The DPM was originally proposed and led by the Bank of Spain and after through Eurofiling [19; 20; 23; 25].

This model started using the taxonomies of Balance Sheet Items and Interest Rates Monetary Financial Institutions [18] and they were worked by the Polish business reporting advisory group, BR-AG².

¹ <https://www.eba.europa.eu/>.

² <https://br-ag.eu/>.

The objective was the develop of XBRL taxonomies for COREP (*COmmon REPorting*, focused on the consolidated, sub-consolidated and solo reporting of capital requirements and capital and reserves based on EU directives) and FINREP (*FIancial REPorting* for supervisory purposes inspired in IAS/IFRS). More information in *Eurofiling*³.

The DPM was also improved in the development of taxonomies for respectively *Cayman Islands Monetary Authority*⁴ and *Bermuda Monetary Authority*⁵.

In 2012, the use of XBRL became widespread among the supervisory community [25..27; 31; 33..35; 38; 40..46]. The effort to build the set of metadata that eventually led to a set of taxonomies, promoted the use of a methodology among the European Supervision.

This methodology could be used in the elaboration and documentation of XBRL taxonomies, for supervisory and statistical reports. The challenge was raised that the DPM methodology should be applied not only by the EBA, but also by the other European supervisory agencies, and for the statistical requirements of the ECB (*European Central Bank*⁶), as in many cases the institutions and groups filing the data are the same [38].

It was planned to try to reach a consensus on a unique DPM methodology at an international level, as occurs in other business areas, since a generalization would lower costs in infrastructure and development. In May 2012, through *Eurofiling* community, the CEN⁷ WS XBRL group of volunteers and experts was built to work on the standardization of the DPM model at the European Committee for Standardization (CEN) [65].

The DPM has evolved and is currently being used in production in 27 EU⁸ member states, as well as the UK, South Africa, the Russian Federation, Moldova and Israel [121]. The European regulators, including the ECB, EBA, EIOPA (*European Insurance and Occupational Pensions Authority*⁹), European Commission or SRB (*Single Resolution Board*¹⁰), are not only users, but actively contribute to shaping the future of the DPM [87..93; 99..108].

The standard is used to create common models and rules through supervisory, statistical and financial data in regulatory environments for banking, insurance, pension funds and investment firms.

In August 2021, the DPM of the CEN was promoted to ISO standard [109..111]. Now, as ISO standard 5116, the DPM as living topic, needs to continue developing, having to meet all the challenges that the future entails.

The new DPM standard consists of three documents titled:

- ISO 5116-1:2021. Improving transparency in financial and business reporting — Harmonization topics — Part 1: European data point methodology for supervisory reporting [109].
- ISO 5116-2:2021. Improving transparency in financial and business reporting — Harmonization topics — Part 2: Guidelines for data point modelling [110].
- ISO 5116-3:2021. Improving transparency in financial and business reporting — Harmonization topics — Part 3: Mapping between DPM and MDM [111].

3. References

The following table shows all the references to the DPM found, the majority contained in *Eurofiling*¹¹. References are sorted by date, the first column indicates this order. The second column shows the publication date. The third, the title. The fourth, the author or authors. The fifth, the name of the file and reference to how to obtain it. And, the sixth, it has various comments, such as type of document, name of the conference or magazine, with their references.
